

**Environment America** is an environmental advocacy organization, working to protect our clean air, clean water and open spaces... and we're hiring! Come out to one of our info sessions to hear more about our opportunities.

Please email Anusha Narayanan at [anusha@environmentamerica.org](mailto:anusha@environmentamerica.org) if you have any questions. You can also find more information at [jobs.environmentamerica.org](http://jobs.environmentamerica.org).

### **Environment America Fellowship**

Our fellowship program is a two-year crash course in the nuts and bolts of environmental activism, organizing, advocacy and the kinds of institution-building that can sustain long-term battles.

Each year, we hire college graduates with the passion, commitment and talent to join us. We team experienced environmental advocates and organizers with new staff. And after two years, our fellows are ready to graduate and become a program director, a lead advocate or organizer, or a state director with Environment America or one of our state affiliates.

### **What our fellows do**

Imagine yourself organizing a town hall meeting on solar power. Or imagine releasing a hard-hitting research report on power plant pollution. Or picture yourself building a community coalition around clean water or fracking. During an election year, imagine mobilizing support for a pro-environment candidate for Congress or governor by educating and turning out voters in a key district.

Imagine building the organizational power—the funds, the membership, the activist base and so on—that it takes to keep all of this critical work going for the long haul.

All of this is what you do as an Environment America fellow. Because this is how we build the support it takes to reduce global warming pollution, create more solar and wind power, spare our parks and forests from fracking, keep our beaches, rivers and streams clean, and protect our wildlife and wild places.

Is it easy? No, we're up against some wily opponents who are incredibly well-funded.

Is it rewarding? Absolutely. And given global warming, fracking and all of the tough problems we're facing right now, can you imagine doing anything more urgent and meaningful?

### **Locations and start dates**

We're hiring for Boston and DC. We accept applications on a rolling basis.
