The Council of Economic Advisers is now recruiting research assistants (RAs) and staff economists. Our target RA recruits are those who are considering graduate school in economics.

Research assistants are usually college graduates who majored in economics or related fields, and who took courses in mathematics, statistics, and computer programming. At the CEA, they may work in a variety of fields, including macroeconomics, international finance, international trade, finance, labor economics, education, public finance, health, industrial origination, housing, energy, environment, and agriculture. They help write memos and reports to inform the President and senior White House staff, a process that involves economic and econometric analysis, collecting data, drawing charts, fact-checking, and reviewing literature. They may also participate in the policy development process by representing the CEA at interagency meetings. Additionally, they participate in all aspects of writing the annual Economic Report of the President.

Staff economists are usually students in Ph.D. programs in economics or public policy who have completed all their classes. Staff-economist duties are similar to those of research assistants, except that they are expected to perform at a higher level. Staff economists who serve at the CEA generally return to complete their theses with new ideas and new motivation.
