NERA Economic Consulting (www.nera.com) is the oldest and largest firm of independent consulting economists. We are a global firm dedicated to applying economic analysis to industry, government and public policy issues. For over half a century, NERA’s economists have been analyzing markets, advising corporations, governments and interest groups, preparing policy recommendations, assessing liability and damages in contested industrial and international treaty settings, and contributing to the scholarly economic literature on a wide variety of economic and regulatory topics. We work with governments and the world’s leading law firms and corporations. We bring scholarly rigor, objectivity, and practical industry and institutional experience to bear in our work.

NERA’s clients value our skill with the latest analytical methods, quality of our analysis, clarity in our public communications and independence. NERA serves clients from more than 25 offices across North America, Europe, and Asia Pacific.

We have an opening for a Researcher to join the Energy, Environment, Communications and Infrastructure practice in our Boston, MA office. That group is at the forefront of the continuing transformation of the energy and transportation industries. We have participated in regulation and privatization in various energy and transport industries around the world. We developed approaches for introducing competition in segments such as power generation and gas supply where competition is workable and for improving the regulation of sectors where it is not. We work with companies, governmental bodies, and regulators worldwide to design competitive gas and electricity markets and to develop tariffs and rules of access for regulated transmission and distribution systems for electricity, gas, and the transport of oil and oil products.

Your responsibilities may include designing and building quantitative and financial models; reviewing, summarizing, and analyzing industry trends and competitor and academic research; creating trial exhibits and presentation materials; drafting memos and expert reports; managing large data sets and writing programs to implement complex analyses; supporting published research and participating in client meeting and conference calls.

As a qualified candidate, you should have a BA/BS in economics or public policy with an economic focus. A background in finance and accounting helps in the analysis of industry data and in modeling economic values and damages. We value excellent oral and written communications skills and facility with data handling software.

For immediate consideration, please visit the Career section of our website (www.nera.com) and apply to the Researcher position by creating your personal profile and submitting your resume, cover letter and unofficial transcript. Only those applicants who complete their profile completely will be considered.
